

RADIANCE – LAM TV (Test Vehicle) Request Management System

This repository has a **complete A to Z guide** for building the "**LAM – TV Request Management System**" (TVRMS).

The only input given by the manager was the PowerPoint file `ABC_REQUEST.pptx` (HCLTech's solution approach, September 2026). Everything here is based on that file. Where the file does not give a detail, we made a **sensible assumption**. Every assumption is marked with **(ASSUMPTION)** so that you can confirm it with your manager.

1. What is this project? (in one paragraph)

Today, LAM manages **Test Vehicle (TV) requests** with emails, PowerPoint files, Excel sheets and loose documents. Nobody can see the full picture in one place. We will build **one central system** on **Microsoft Power Platform** where a request is **created → reviewed → assessed (feasibility) → funded → executed → closed**, with all documents stored in **SharePoint**, all emails sent automatically by **Power Automate**, and management reports in **Power BI**.

2. Technology used (from slide "Solution Architecture")

Layer	Tool	What it does
Login / Security	Microsoft Entra ID	Users sign in with their company account
UI for end users	Power Apps Canvas App	Request intake, review, feasibility, funding, execution, closure
UI for admins	Power Apps Model-Driven App	Master data, notification logs, audit
Automation	Power Automate	Emails, approvals, reminders, folder creation, PDF
Data	Dataverse	All request data, security roles, audit
Documents	SharePoint Online document library	One folder (workspace) per TVID
Emails	Outlook (Office 365)	All notifications
Reports	Power BI	Status, cycle time, aging, cost, utilization

3. How to read this guide (follow in order)

#	File	What you will learn
0	docs/00-Is-The-Documents-Enough.pdf	Is the PPT enough? Gaps + list of questions to ask your manager
1	docs/01-Project-Understanding.pdf	Slide-by-slide explanation, roles, glossary, 6 phases
2	docs/02-Environment-Setup.pdf	Licenses, environments, solution, publisher, SharePoint site
3	docs/03-Dataverse-Data-Model.pdf	All tables, columns, choices, relationships, with sample data
4	docs/04-SharePoint-Documents-Management.pdf	TVID workspace, folders, versioning, permissions, 7-year retention
5	docs/05-Security-Roles.pdf	Role-based access, row-level security
6	docs/06-Canvas-App.pdf	Every screen, with Power Fx formulas
7	docs/07-Model-Driven-App.pdf	Admin app for master data and logs
8	docs/08-Power-Automate-Flows.pdf	All flows step by step (notifications, approvals, reminders, PDF)

#	File	What you will learn
9	docs/09-Power-BI-Reports.pdf	Dashboard pages and DAX measures
10	docs/10-Testing-and-UAT.pdf	Test cases with sample data
11	docs/11-Deployment-GoLive-Hypercare.pdf	Moving Dev → Test → Prod, go-live checklist, hypercare
12	docs/12-Project-Plan-9-Weeks.pdf	Week-by-week plan, sprint backlog
13	docs/13-End-to-End-Use-Case.pdf	One full request story from start to end (with sample data)
–	sample-data/	Ready CSV files to import into Dataverse for testing

4. Quick answer: "Is this document enough to develop the project?"

Short answer: No, not fully. The PPT is a **proposal / solution approach** (what will be built, the timeline and the price). It is **good enough to start the "Plan for Success" phase (Week 1–2)** and to set up the platform, but it is **not a detailed requirement document**. Field lists, status rules, reminder days, approval rules, email texts, report KPIs and master data are missing. These are exactly the things the PPT says will be finalised in Week 1–2 ("Solution Blueprint"). See [docs/00-Is-The-Document-Enough.pdf](#) for the full gap list and the questions to ask.

5. PDF version (for reading, printing or sending)

Every `.md` and `.csv` file in this repository is also available as a PDF in the `pdf/` folder:

What	Where
Everything in one PDF (cover, contents, all guides, all sample data, clickable links and bookmarks)	<code>pdf/LAM-TV RMS-Complete-Guide.pdf</code>
One PDF per guide	<code>pdf/README.pdf</code> and <code>pdf/docs/00-...pdf</code> to <code>pdf/docs/13-...pdf</code>
One PDF per sample data file (landscape)	<code>pdf/sample-data/*.pdf</code>

If you change any `.md` or `.csv` file, create the PDFs again with `tools/pdf-export/make-pdfs.sh` (it needs Node.js, pandoc, Python with pypdf and a Chromium browser – see the comments at the top of the script).
